1. On the right side of the taskbar, you will see a wireless network icon like the one below. Click on the wireless icon.

2. A window with available network connections will open. To refresh the list of available networks, click on the button highlighted in the screenshot below.

3. Once you decided which network to connect to, click on the name. If you plan to use that network in the future, make sure you check the box that says 'Connect automatically'. Next, click on the Connect button. After a few seconds, you will be asked to enter the security key. Type the security key and click on OK.

4. If you typed an incorrect password, Windows 7 will request you to type it again and again until it matches the password of the network you are connecting to. If everything is OK, Windows 7 will connect to the network you selected using the given security key. When the connection is successful, the wireless icon from your taskbar changes as shown below.
